

IPTrunking Basic™

A PBX Integration/PRI Replacement Service.

The Top Line. Here is a versatile and cost-effective solution that delivers the productivity and economic benefits of VoIP while enabling the addition of value-added feature overlays not included with your existing PBX/Key system.

IPTrunking Basic: Now You Can Make Your Move - And Do It On Your Own Schedule.

If you run a business, particularly a small or medium-sized business (SMB), you are probably weighing how you can economically and easily migrate to the benefits of a VoIP solution while not immediately abandoning the investment you have made in your existing PBX/Key system and handsets.

IPTrunking Basic from Corporate Telecomm® is the solution that will allow you to make that move by giving you the ability to:

- purchase a limited number of lines to match your communications costs closely to your actual business needs
- consolidate your data and voice bills to lower expensive phone bills due to long distance calls and the taxes that go with them
- leverage your existing Internet connection for both data and voice while providing the ability to add enhanced calling features not already provided by the existing PBX or Key Set
- streamline your communications platform and enjoy immediate and significant economic advantages while smoothly transitioning to a hosted VoIP service
- provide new generation network to enhance your mobility via the Corporate Telecomm network

How IPTrunking Basic Smooths The Transition.

Making your move to VoIP is not as challenging a proposition as you might think. Look at a typical “before” scenario. As depicted in Illustration A, voice and data reside on separate networks within the infrastructure, with separate cost centers and, usually, separate support staffs as well. However, with IPTrunking Basic implemented at your PBX site, all of that changes by leveraging your data connection to simultaneously serve both your data and voice needs.

Illustration A

As shown in Illustration B, we show you how you can leverage your existing data connection by utilizing a certified Integrated Access Device (IAD) which is simply installed at your premises, and connects to our proprietary network via our IPDirect™ service or via an existing broadband connection. This configuration provides the necessary amount of trunks (DSO) access to DIDs nationwide—and can also lower your long distance bills and other related fees and taxes.

IPTrunking Basic and A la Carte Services.

IPTrunking Basic services can be ordered with powerful a la carte and Class 5 user feature overlays such as Simultaneous Ring and Sequential Ring. These advance features can be used to supplement those features not already provided by an existing PBX or Key Set.

Essentially, Basic IPTrunks can be ordered (minimum of 4 initial order) and add just the number of a la carte features required by the customer. The number of a la carte features that can be purchased is independent of the number of IPTrunks purchased. There is no minimum number of a la carte features required. A la carte features are priced separately from the IPTrunking Basic services.

The a la carte services* that can be added are: Auto Attendant (1 DID included), Class 5 Feature Package, Conference Bridge, Instant Group (DIDs required), Hunt Group (DIDs required), IPCallRecord (DIDs required), Voice Mail (DIDs required), and IPFaxSolution (1 DID included)

**No a la carte services are included or required. A la Carte Services are priced separately.*

IPTrunking Usage Plans.

Two usage plans available with each IPTrunking options:

- Plan A - includes 1000 minutes outbound local and domestic long distance calling and unlimited inbound minutes
- Plan B - includes unlimited outbound local and domestic long distance calling and unlimited inbound minutes
